

# 7 Fr. x 90cm Super Arrow-Flex® Sheath Introducer Set with “Y” Connector and Side Arm Extension (Product No. CL-07790-R)

## Advanced technology provides additional benefits.

The 7 Fr. x 90cm Super Arrow-Flex® Sheath Introducer offers a practical tool for accessing hard-to-reach arteries, like the carotid arteries.

Features include:

### 90cm length

Assures successful access to the carotid arteries.

### Tuohy “Y” Connector

Threaded hub allows attachment of included “Y” Connector with its own Tuohy Hemostasis Valve and included Side Arm Extension with 3-Way Stopcock.

### Specially designed lubricous inner surface

For ease of advancing devices along its 90cm length.

### Sheath replaces guide catheter

Exclusive 7 Fr. guiding sheath design eliminates the need for using a 9 Fr. I.D. sheath with a 7 Fr. I.D. guiding catheter, thereby reducing puncture size, procedure time and cost.

### Radiopaque tip marker

Enables precise deployment of system beyond tip of sheath.

## Unique Super Arrow-Flex® coil-wire construction virtually eliminates kinking.

- Arrow’s exclusive coil-wire design allows the sheath to flex at any point, and in any direction, without kinking or collapsing.
- The sheath’s structural integrity is created by its unique design that seals wire coil between layers of flexible polymer.
- Hydrophilic surface promotes ease of insertion through the skin.
- The sheath/dilator assembly tracks easily over a .035" guidewire.
- Sheath’s radiopacity allows visualization of the advancing catheter during insertion.

*Exclusive sheath design negotiates tortuous vessels from femoral artery insertion site to carotid artery without kinking or collapsing.*

For more information on this exceptional sheath for carotid artery access, call your Arrow representative or contact us by calling 800 523-8446 or 610 378-0131.

**Sheath/Dilator Assembly with “Y” Connector and Side Arm Extension attached**

Longer length makes  
the carotid arteries  
easier to reach.
