

# Super Arrow-Flex® Sheath /Dilator Set with 90° curved tip for renal artery access

6 Fr. now available with Tuohy “Y” connector.  
7 Fr. now available with or without Tuohy “Y” connector.

## Advanced technology provides additional benefits.

The Super Arrow-Flex® Sheath/Dilator Set offers a practical tool for accessing hard-to-reach arteries, like the renal arteries.

Features include:

### 45cm length

Assures successful access to the renal arteries. Set now includes “Y” Connector with its own Tuohy Hemostasis Valve and Side Arm Extension with 3-Way Stopcock.

### 90° Curved Tip

Both sheath and dilator have a curved tip for easy access to the renal artery.

### Dilator extended length

Is only 1.5 cm to provide safe, secure access into renal arteries.

### Sheath replaces guide catheter

Exclusive design eliminates the need for using a guiding catheter, thereby reducing size of puncture and minimizing procedure time and cost.

### Radiopaque tip marker

Encapsulated Radiopaque Tip Marker to clearly locate and control sheath advancement into renal arteries.

## Unique Super Arrow-Flex® coil-wire construction virtually eliminates kinking.

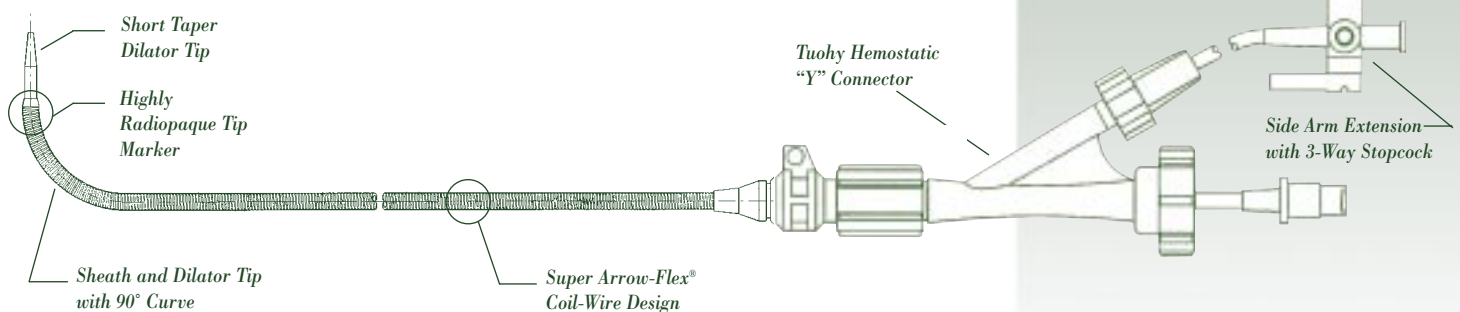

- Arrow’s exclusive coil-wire design allows the sheath to flex at any point, and in any direction, without kinking or collapsing.
- The sheath’s structural integrity is created by its unique design that seals wire coil between layers of flexible polymer.
- Hydrophilic surface promotes ease of insertion through the skin.
- The sheath/dilator assembly tracks easily over a .035" guidewire.
- Sheath’s radiopacity allows visualization of the advancing catheter during insertion.

90° curved tip

makes access to the renal arteries easier.

For more information on this exceptional sheath for renal artery access, call your Arrow representative or contact us by calling 800 523-8446 or 610 378-0131.
